

ResSim 3.1 RC4 Release Notes

Release Date: 5/16/2015

Release Type: Scheduled

ResSim Adapter Version: 27665

ResSim Application Version: 3.1.RC4

CHPS Build: 5.3.1

Build and Package Date: 11/5/2012

Tested against FEWS Binary: 2015.02 build 60945, patched from 59855

Introduction

This document contains release notes for ResSim.3.1.RC4_27665. This software package was built by combining the Linux version of the HEC application created by RMA and the FEWS adapter for running ResSim in CHPS which is also maintained by RMA.

This version of ResSim has not changed since the last release and if an RFC is on 3.1.RC4, they do not have to reinstall.

Notes

This edition of the software is now the "official" version of ResSim distributed with CHPS; all versions prior to 3.1.RC4 are considered experimental and will not be supported by CHPS Support Group (part of the Field Support and Infrastructure team in the Office of Central Processing) or NWC.
